

The Dirty Truth

Is Earth doomed? Is Mars our only hope? In this project, students learn about dangers to Earth's environment, as well as about efforts humans are making to colonize other planets. They conduct a scientific investigation into whether plants can grow in Martian soil, then split into teams to raise money for a charity that either supports environmental protection or space exploration.

The project culminates when students invite the community to your school to share what they've learned and make a pitch for people to fund the charities they have chosen.
