

## How Does Your Garden Grow?

We know that increased access to nutritious food can improve diet and health. In this project, students will have the opportunity to engage in agricultural practices, learn about the responsibilities and impacts of land cultivation, and explore the web of interactions in ecosystems.

As a culminating project, students will build a school garden, harvest the fruits of their labor, and sell produce to raise money to buy supplies so you can make gardening at school sustainable for the long term!
