

The Sound of Music

Walter Pater said, “All art aspires to the condition of music,” and it’s true: nothing so uplifts the human spirit. In this project, students investigate the history, mathematics, and theory of music. They research the science behind music’s impact on human well-being.

The project concludes when students create a performance to uplift the spirits of patients at a local hospital, using appropriate technology to make their presentation polished and professional. Students use their performance to help form a connection and offer support to individuals in need.
