

What's in Your Water?

Water connects us all. In this project, students learn about watersheds and the importance of clean, fresh water. They go out into nature to collect and analyze water samples from a local waterway. Then, they learn about technology, as well as presentation skills, as they prepare to share what they've learned with the world.

The project culminates when students share their learning at a fundraiser where they collect money for a water-related charity that students have selected.
